猩红热
猩红热为A组β型溶血性链球菌（也称为化脓链球菌）感染引起的急性呼吸道传染病。其临床特征为发热、咽峡炎、全身弥漫性鲜红色皮疹和疹退后明显脱屑。少数患者患病后可出现变态反应性心、肾、关节的损害。
患者感染A组β型溶血性链球菌后，病原体侵入人体后咽部引起化脓性

1. Our robot could query novel coronavirus pneumonia distribution in china, and for now we only have a part of data. Querying by province is supported.

2. Our robot could query novel coronavirus pneumonia news, and get information from the Internet website. The next step is to improve the functionality.

3. Our robot could provide information diseases (a part of diseases). Displays a list of diseases in this type when user select some category of diseases information. After the user selects to know a disease information, it shows the disease introduction.
